akredhruvesh@gmail.com | +91 8862051316 | Mumbai, Maharashtra, India | Portfolio - Dhruvesh Akre | 15 June 2003

PROFILE

Final-year Information Technology student with a Diploma in Electrical Engineering, specializing in frontend-focused full stack development. Experienced in building scalable web applications using React, JavaScript, Flask, and SQL. Passionate about developing user-centric products with strong UI/UX and solving real-world problems. Built multiple projects including a smart dustbin management system and AI-based web applications. Possesses strong project planning and leadership skills with the ability to manage tasks, coordinate teams, and deliver projects efficiently. Demonstrates effective problem-solving, adaptability, and a goal-oriented approach to successfully execute projects from planning to completion.

WORK EXPERIENCE

Aartech Webworks and Cyber Security, *Frontend and Backend Developer Intern*

11/2025 – 03/2026

Mumbai, Maharashtra, India

Developed and delivered a full stack web application, handling both frontend and backend development. Contributed to multiple features and improvements, demonstrating strong problem-solving skills and the ability to quickly adapt to technical challenges. Collaborated effectively with the team and supported ongoing development tasks, showcasing a proactive and responsible work approach.

Vertex Systems, *Frontend Developer Intern*

05/2025 – 06/2025

Mumbai, Maharashtra, India

Completed a one-month internship in web development, working with HTML, CSS, and JavaScript. Gained hands-on experience in frontend development and applied concepts to real-world tasks. Demonstrated strong learning ability, enthusiasm, and commitment while contributing effectively to assigned projects.

PROJECTS

Photrum Technologies Web Platform,

11/2025 – 03/2026

Full-Stack Cybersecurity Services Website with Admin CMS

- Built a full-stack cybersecurity company website using Flask, Jinja2, and MySQL with modular routing and reusable templates.
- Developed an admin dashboard to manage blogs, featured images, gallery uploads, and client showcase content without code changes.
- Implemented dynamic public pages (Home, Blog, About, Services, Team, Contact) with database-driven rendering and responsive UI components.
- Added visibility control features for team content, including page-level and member-level toggles reflected across public navigation and sections.
- Integrated contact form workflow with email delivery support and graceful fallback handling for non-configured mail environments.

EcoGrowAI: IoT-Enabled Crop & Fertilizer Recommendation System, *Full-Stack Development / Sustainable Farming Technology / IoT / Embedded System*

06/2026 – 04/2026

- Developed an IoT-integrated smart agriculture platform that collects real-time sensor readings (soil and environmental parameters) and feeds them into machine learning models for crop and fertilizer recommendation.
- Built a full-stack web application using Python and Flask, with REST/form-based prediction workflows for real-time inference and user-friendly dashboards.
- Integrated ML inference pipeline (scikit-learn models) for classification-based recommendations, including preprocessing/encoding for sensor-driven and user-input features.
- Implemented relational database management with MySQL and SQLAlchemy to store prediction logs, user/admin activity, and content data for analytics and traceability.
- Created secure admin modules with authentication, CRUD operations, and content management, demonstrating backend development, API integration, and production-ready web architecture.

Blockchain-Based Certificate Verification System, *Full-Stack Development / Blockchain / Web Security / QR Verification*

01/2026 – 04/2026

- Developed a secure certificate issuance and verification platform using blockchain to ensure tamper-proof and fraud-resistant credentials.
- Built smart contracts with Solidity and Hardhat for immutable storage of certificate hashes and decentralized verification.
- Designed backend using Node.js and Express.js with JWT authentication, role-based access, and certificate lifecycle management.
- Integrated MongoDB and developed frontend with React for QR-based verification and admin dashboards.
- Implemented a hybrid verification system combining blockchain validation with database status checks for real-time results.

FixMyWaste – Smart Waste Management System, *Web Development / Smart City Solutions*

2024 – 2025

- Developed a full stack web application using **Flask, JavaScript, MySQL**

- Implemented **role-based authentication** (admin, driver, employee, user)
- Built **FixMyWaste platform** for waste tracking and management
- Designed **route optimization module** for efficient waste collection
- Developed **complaint management system** for users
- Planned **IoT integration** for real-time monitoring (future scope)

Personal Portfolio Website (GitHub Pages),
Frontend Development / Personal Branding

07/2025 – 10/2025

- Developed portfolio website using **HTML, CSS, JavaScript**
- Hosted project using **GitHub Pages**
- Designed responsive UI for multiple devices
- Implemented **project showcase and contact sections**
- Focused on **user-friendly navigation and layout**

E-Gram Sahayak – Village Management & Assistance System,
Full Stack Development / Machine Learning / E-Governance

2023 – 2024

- Focused on solving **real-world rural**
- Developed a full stack web application using **Flask, Python, HTML, CSS, JavaScript**
- Acknowledged villager about new scheme and other government schemes
- Implemented data preprocessing and model integration
- Focused on solving **real-world rural and agricultural problems**

AniShop – Single Page E-Commerce Web Application,
Frontend Development / Single Page Application (SPA) / E-Commerce

2023

- Developed a **Single Page Application (SPA)** using HTML, CSS, and JavaScript
- Designed responsive UI for **product listing, categories, and user interface**
- Built structured layout for **e-commerce functionality**
- Focused on **UI/UX design and smooth user experience**

Solar Tracking System using Arduino Uno,
IoT / Embedded Systems / Renewable Energy

2018 – 2019

- Built an automated solar tracking system using Arduino Uno
- Integrated LDR sensors to detect sunlight direction
- Controlled gear motors using motor driver for panel movement
- Improved energy efficiency compared to fixed solar panels
- Implemented real-time tracking using embedded programming

EDUCATION

Bachelor of Information Technology,
St John College of Engineering

2023 – Present
Palghar, Mumbai, Maharashtra

Diploma in Electrical Engineering, *Pravin Patil College*

07/2019 – 07/2022
Bhayandar, Mumbai, Maharashtra

High School, *R. H. Save Vidyalaya, Tarapur*

06/2013 – 05/2019
Palghar, Mumbai, Maharashtra

SKILLS

Programming & Web Development:

JavaScript, Python (Flask), HTML, CSS, C++ (Basic)

Database:

MySQL, MongoDB (Basic / Learning)

Creative Tools:

Adobe Photoshop, Illustrator, Premiere Pro, After Effects

Frontend Development:

Responsive Design, SPA (Single Page Applications), UI/UX Basics

Tools & Technologies:

VS code, Git, GitHub, AutoCAD

IoT & Embedded (Basic):

Embedded Systems

COURSES

IoT & Robotics

2024 | Palghar, Mumbai

MS-CIT,
(Maharashtra State Certificate in Information Technology)

2019 | Virar, Mumbai

LANGUAGES

English

Hindi

Marathi
